

# Vascular Surgery Consultation

**METRO VASCULAR ASSOCIATES**

**Consultation Report**

**Date: September 18, 2024**

**Patient: Maria Rodriguez**

**Provider: Dr. Lisa Wang, MD, Vascular Surgeon**

**Reason for Consultation: Evaluate arterial perfusion for diabetic foot ulcer**

**Vascular Assessment:**

- **ABI (Ankle-Brachial Index): 0.85 (mild PAD)**
- **Toe pressures: 65 mmHg (adequate for healing)**
- **Doppler ultrasound: Patent vessels, mild atherosclerotic changes**
- **TcPO2 (transcutaneous oxygen): 35 mmHg (borderline)**

**Assessment: Mild peripheral arterial disease with adequate perfusion for wound healing.  
No revascularization indicated at this time.**

**Recommendations:**

- **Continue current wound care**
- **Serial ABI monitoring**
- **Consider HBOT if wound healing stagnates (TcPO2 borderline)**
- **Risk factor modification (smoking cessation, lipid control)**

**Dr. Lisa Wang, MD**

**Board Certified Vascular Surgeon**
