

Surgical Debridement Notes

METRO WOUND CARE CENTER

Surgical Procedure Note

Date: September 10, 2024

Patient: Maria Rodriguez

Surgeon: Dr. Sarah Chen, MD

Procedure: Sharp surgical debridement of right heel ulcer

Preoperative Diagnosis: Wagner Grade III diabetic foot ulcer with osteomyelitis

Procedure Description: Under local anesthesia with 1% lidocaine, sharp surgical debridement was performed. Removed approximately 15cc of necrotic tissue and debris. Bone biopsy obtained from exposed calcaneus. Copious irrigation with normal saline. Hemostasis achieved.

Tissue Culture Results (9/12/2024):

- Methicillin-sensitive Staphylococcus aureus
- Enterococcus faecalis
- Sensitivity: Clindamycin, Cephalexin

Bone Biopsy Results (9/14/2024):

- Chronic osteomyelitis consistent with diabetic foot infection
- No malignancy identified

Post-Procedure Plan:

- IV Clindamycin 600mg q8h x 6 weeks
- Total contact cast applied
- Non-weight bearing right foot
- Follow-up in 1 week

Complications: None
